

Multi-Disciplinary Research Training Workshop

28th January -8th February 2019

What is Micro-Research?

The Research concept aims at improving health outcomes through small locally driven multidisciplinary teams developing and implementing research projects. This starts with the Research workshop that provides training and opportunities to do research especially in maternal and child health.

Borrowing from microfinance principles, Micro-research provides small grants to researchers. Only relevant, locally applicable community based health research questions are eligible for funding.

Training:

The workshop will train up to 30 researchers to improve their practical applied research skills. The workshop will run for Nine days every day from 8:30pm- 5:00pm.

What will you get?

- Outstanding research skills from Canadian and MUST researchers
- Expect the following skills;
 - Defining a research question
 - Qualitative and quantitative research methods
 - Developing a conceptual framework
 - Data analysis methods
 - Basics of sample size determination
- Course material on memory stick
- Certificate
- On-going support to do research through mentors

Who is eligible to attend?

- University academic staff, Health professionals, ICT professionals, social scientists, local government personnel, community development officers, civil society organisation staff.
- Post graduate students
